In summary, a well-designed multimodal system that fuses two or more information sources can be an effective means of reducing recognition uncertainty. Performance advantages have been demonstrated for different modality combinations (speech and pen, speech and lip movements), as well as for varied tasks and different environments.

A multimodal biometric system increases the scope and variety of input information the system takes from the users for authentication. Why Multimodal Biometrics is Required? The unimodal systems have to deal with various challenges such as lack of secrecy, non-universality of samples, extent of user's comfort and freedom while dealing with the system, spoofing attacks on stored data, etc.

Multimodal Transport System. A multimodal transport system integrates different geographical scales from the global to the local. With the development of new modal and intermodal infrastructure, regions have growing accessibility to the global market. The above figure represents a corridor within a multimodal transportation system composed of a set of gateways and hubs (A, B, and C) where regional and local transportation networks converge.
