Both accuracy and precision reflect how close a measurement is to an actual value, but accuracy reflects how close a measurement is to a known or accepted value, while precision reflects how reproducible measurements are, even if they are far from the accepted value. Key Takeaways: Accuracy Versus Precision

What Is the Difference Between Accuracy and Precision?

For precision and long distance shooting, you want the gun to be as precise as possible. Therefore, strive for the tightest precision rating, such as 5 MOA. If the rifle isn't shooting 1" groups or less at 100, it's not what you want for long distance shooting. Think about it, 1 MOA means 1" at 100 yards.
