find weight; if you know weight you can find mass. $F_w = mg$ allows you to convert between mass and weight easily. On another planet your mass would be the same, but your weight would change depend-ing on the amount of gravity. On the moon you would weight 1/6th your weight on the earth, because the moon's gravity is 1/6th that of earth's.

Mass $F = mg$

Friction Friction is caused by two things moving against each other. Friction always opposes motion. Friction causes things to wear out and causes heat, so we use lubricants to reduce friction. Equilibrium (State of Equality) At equilibrium the following are true: $F_{net} = 0 \text{ N}$ (no net force) $a = 0 \text{ m/s}^2$ (no acceleration) $v = 0 \text{ m/s}$ (constant speed)
