Microeconomics is the study of the economic behavior of individuals, households and firms. Where macroeconomics looks at the big picture of the economy, microeconomics looks at the individual behaviors that drive economic processes. For the most part, microeconomics and macroeconomics examine the same concepts at different levels. The following are illustrative examples of microeconomics.

In microeconomics, it applies to price and output determination for a market with perfect competition, which includes the condition of no buyers or sellers large enough to have price-setting power. For a given market of a commodity, demand is the relation of the quantity that all buyers would be prepared to purchase at each unit price of the good.

14.03 Fall 2000 Problem Set 7 Solutions Theory: 1. If used cars sell for \$1,000 and non-defective cars have a value of \$6,000, then all cars in the used market must be defective. Hence the value of a defective car is \$1,000. Since consumers are risk neutral, the price of a new car is equal to the expected value of a new car:
