Chapter 19: Viruses Overview
Experimental work with viruses has provided important evidence that genes are made of nucleic acids. Viruses were also important in working out the molecular mechanisms of DNA replication, transcription, and translation. Viruses have been important in the development of techniques of manipulating and transferring genes.

Members of the Archaea dominate harsh environments such as hot springs, salt ... 19.1 PROKARYOTES, VIRUSES AND THE STUDY OF PLANTS

Archaea, Bacteria, and Viruses

Other viruses are just identified by their host group, such as animal or plant viruses. Once a cell is infected, the effects of the virus can vary depending on the type of virus. Viruses may cause abnormal growth of the cell or cell death, alter the cell's genome, or cause little noticeable effect in the cell.
