Chordates Vertebrates Bony Fish Questions

Bony fish have broad, flat scales. The skin contains mucous secreting glands that reduce friction as the fish swims through the water. A lateral line system detects vibrations in the water. Most species are oviparous. Bony fish are the largest group of vertebrates. Approximately 49,000 species have been identified.

Questions

Bony Fishes. Members of the clade Osteichthyes, or bony fishes, are characterized by a bony skeleton. The vast majority of present-day fishes belong to this group, which consists of approximately 30,000 species, making it the largest class of vertebrates in existence today.

15.6: Vertebrates - Biology LibreTexts

ADVERTISEMENTS: In this article we will discuss about the examples of vertebrate chordates. The first vertebrates were fishlike. Fishes are aquatic, gill-breathing vertebrates that usually have fins and skin covered with scales. The larval form of a modern-day lamprey, which looks like a lancelet, may resemble the first vertebrates- it has the three chordate characteristics [...]
