You need to enter a unique load command for each IP phone model you are using in your Cisco Unified CME system. Only enter the firmware filename; do not enter the .bin extension. Note Because the newer Cisco Unified CME software creates a directory structure in the flash memory, be sure you have aliased each of the firmware files using the tftp-server syntax discussed earlier in this chapter.

Firmware Load Files - Voice Config - Cisco Certified Expert

When there are several routes with an equal metric value, by default all dynamic routing protocols, including EIGRP, will use all these routes to forward packet in load balance style. However, there is a way to configure load balancing on Cisco EIGRP using routes with different metric values. This unique feature on EIGRP is called unequal cost load balancing and it's very easy to be implemented.
