Cpace Reflection Form
Implementing reflection in C# requires a two-step process. You first get the "type" object, then use the type to browse members such as "methods" and "properties.". This is how you would create instances of DateTime class from the system assembly: // create instance of class DateTime DateTime dateTime = (DateTime)Activator.CreateInstance(typeof(DateTime));

How C# Reflection Works With Code Examples
Scene with Screen Space Reflection. Screen Space Reflection creates more detailed reflections than other methods such as Cubemaps A collection of six square textures that can represent the reflections in an environment or the skybox drawn behind your geometry. The six squares form the faces of an imaginary cube that surrounds an object; each face represents the view along the directions of the world axes (up, down, left, right, forward and back).
