Unified Modeling Language (UML) plays a big role in software development, but also in non-software systems throughout many industries, as it's a way to visually show the behavior and structure of a system or a process. UML helps showcase potential errors in application structures, system behavior and other business processes.. Why UML? UML first

data according to a database model. The designer determines what data must be stored and how the data elements interrelate. With this information, they can begin to fit the data to the database model. Database management system manages the data accordingly. Database design involves classifying data and identifying interrelationships. This
