I'm switching from Digifant II to carbs. I really wanna keep the electronic ignition since it has never given me problems. I know that on DigIII the ignition is managed by the ECU, but I'm removing the entire EFI system. Hos can I adapt my current ignition to my new set of carbs or which ignition setup do I have to run in my car? Thanks

The ECM (electronic control module) in a car is the vehicle's brain. The ECM is responsible for receiving and transmitting signals to all the sensors in the vehicle. When the ECM goes bad, it can cause the car to run erratically, if at all. Replacement takes just a matter of minutes, as the ECM is easy to access. ...

How to Replace an ECM | It Still Runs

No Start 1: Checking For Spark The majority of the cranks but does no start conditions I've troubleshooted and repaired (on GM 3.1L, 3.4L equipped vehicles) had their root cause in the ignition system. So, the Ignition system should be the first thing to check. Testing the ignition system, to see if it's the cause of the no start condition on your car or mini-van simply involves checking that ...
