Electroencephalography (EEG) is an electrophysiological monitoring method to record electrical activity of the brain. It is typically noninvasive, with the electrodes placed along the scalp, although invasive electrodes are sometimes used, as in electrocorticography, sometimes called intracranial EEG.. EEG measures voltage fluctuations resulting from ionic current within the neurons of the brain.

APWU has worked via e-Appeal committee to create a web-based grievance software system to improve the efficiency and security of our grievances. Using "cloud" technology, this system allows users to fill grievance forms, save them to file and add documentation throughout each step of the grievance procedure. This program has been coordinated with UnionSoft and it is currently rolled out to ANY ...
