Domain-driven design is the concept that the structure and language of software code should match the business domain. For example, if a software processes loan applications, it might have classes such as LoanApplication and Customer, and methods such as AcceptOffer and Withdraw. DDD connects the implementation to an evolving model. Domain-driven design is predicated on the following goals: placing the project's primary focus on the core domain and domain logic; basing complex designs on a model

Domain-driven design - Wikipedia

Domain-driven design (DDD) advocates modeling based on the reality of business as relevant to your use cases. In the context of building applications, DDD talks about problems as domains. It describes independent problem areas as Bounded Contexts (each Bounded Context correlates to a microservice), and emphasizes a common language to talk about ...
