A striking feature of this area is the occurrence of many large, permanent gullies. A 3.5-km<sup>2</sup> catchment was selected to study the processes of erosion and to adapt the storm-based Limburg Soil Erosion Model (LISEM) to the conditions prevailing on the Loess Plateau. Part of this work consisted of mapping and measuring the largest gully headcuts.

An existing model of sediment wash-off from paved surfaces has been extended to predict fine granular sediment inputs into drainage systems via roadside gully-pots. The model comprises three separate components: (1) a model of sediment accumulation on paved surfaces; (2) a model of sediment wash-off from these surfaces; and (3) a model of ...

Gully erosion is a global driver of soil and landscape degradation. Since 2000, international symposia have been organized to address gully erosion processes, and this paper and special issue provide additional context for the 7 th International Symposium on Gully Erosion held at Purdue University in 2016. Several important themes emerged that include the importance and impact of technology ...

The side walls of gullies become practically straight after rapid sliding following its incision. A straight stable slope model was used for prediction of gully-side wall inclination. This dynamic gully erosion model has been verified with data on gully morphology and dynamics from the Yamal peninsula (Russia) and New South Wales (Australia).

Other successfully used gully models are Ephemeral Gully Erosion Model EGEM (Woodward,1999) and Gully Thermo erosion and Erosion Model GULTEM (Sidorchuk, 1999). Both are two-dimensional models that simulate incision along a transect, the former using an empirical approach and the latter a purely physical approach. In spatial modelling of Gully ...

However, little is known regarding the spatial extent of gullies in SA, especially at a national scale. Previous soil erosion assessment studies indicated the difficulties of modelling or automatically extracting gullies using remote sensing at regional scales due to the temporal and spatial complexity at which the phenomenon occurs.

This paper deals with gully erosion in agricultural environments and concentrates in particular on types of gullies, importance of gully erosion with respect to sediment production in agricultural environments and modelling needs. Two major gully types can be often observed in agricultural lands: ephemeral gullies and bank gullies.

Based on a True Story: Once when I was out of toilet paper, I grabbed a crumpled up wad of toilet paper located on top of the toilet. I found out the hard way it was filled with jalapenos peppers! I couldn't get rid of that pain for days! Why the hell did someone fill toilet paper with jalapeno peppers?
