With clause in oracle is not supported by all oracle versions ,the oracle version 9i and beyond versions. When sub-query needs to be executed multiple times at that time With clause is used. The name which is assigned to the sub-query is treated as though it was an inline view or table.

Oracle SQL queries are not limited to selecting data from a single table. Several tables can be accessed within a query and the data aggregated into a single result set which is returned to the user. The relationship between two tables is known as a join and consists of a mapping of values between specified columns in each table.
