Tumescent solution is also called "Klein's Solution" after the physician who characterized the recipe and the use of it.. It's called "tumescent" because it makes things tumescent, which is a fancy word for swollen. Tumescent is a dilute solution of lidocaine, epinephrine, and sodium bicarbonate that is injected in the subcutaneous tissue (fat).

For example, Sketchy talked about how PPI's can cause osteoporosis fractures. There was a UW question straight up asking about that and you can't find that in FA2016 anywhere. PPI's also increase the risk for C. Diff and Pneumonia which I don't think was in FA2015 but was in Sketchy.

### SketchyPharm is now complete! All the videos are up ...

Example, UNIT 5 CHAPTER 3.3 on bone pharmacology: the image printed is missing important images found in the videos. And, it is pretty obvious that something should be there since there is so much negative space between characters. Seems like the publisher was sent the wrong version of the Sketchy video.

Hey Anki Fam, Here's an updated version of the Dorian deck for Step 2CK. This is a work-in-progress deck meaning that it is not entirely complete, but I felt I had made enough progress where it could certainly benefit those students taking Step 2 later this summer. The main hurdle of the original Dorian deck was the plethora of duplicates spread about the various subdecks, which was almost ...
