We extend the previously derived theory to include the case when the underlying assets are paying dividends. After a short discussion of discrete dividends we mainly study the case of continuous dividends. The theory is derived by reducing the dividend-paying model to an equivalent standard model with no dividends. For the case of a constant dividend yield we derive explicit option pricing ...

We introduce the concept of a financial market and define the concept of a self-financing portfolio. The dynamics of a self-financing portfolio is then derived, both in discrete and continuous time. The theory includes dividend-paying assets and the concept of a cumulative dividend process is introduced and discussed.
