### Type Driven Development in Idris

Idris: A Language for Type-Driven Development. Idris is a programming language designed to encourage Type-Driven Development. In type-driven development, types are tools for constructing programs. We treat the type as the plan for a program, and use the compiler and type checker as our assistant, guiding us to a complete program that satisfies the type. The more expressive the type is that we give up front, the more confidence we can have that the resulting program will be correct.
