Vibrations

Definition of vibration 1 a : a periodic motion of the particles of an elastic body or medium in alternately opposite directions from the position of equilibrium when that equilibrium has been disturbed (as when a stretched cord produces musical tones or molecules in the air transmit sounds to the ear)

Vibration | Definition of Vibration by Merriam-Webster

Vibration is a mechanical phenomenon whereby oscillations occur about an equilibrium point. The word comes from Latin vibrationem ("shaking, brandishing"). The oscillations may be periodic, such as the motion of a pendulum—or random, such as the movement of a tire on a gravel road.

So, to be accurate, we should say that sound is vibrations of any kind of matter. The pad is to keep the vibrations of the alarm from making the plate vibrate. And the vibrations travel better in most other kinds of matter than they do in air. Shops, crowds, the vibrations of both, devitalised and confused her.
