The history of computing hardware covers the developments from early simple devices to aid calculation to modern day computers.Before the 20th century, most calculations were done by humans. Early mechanical tools to help humans with digital calculations, like the abacus, were referred to as calculating machines or calculators (and other proprietary names).

Manual calculations are slow and tedious. Furthermore, consistent results are elusive because of simple blunders that arise when numerous manual tasks are performed. During the precomputer era, significant amounts of energy were expended on the solution technique itself, rather than on problem definition and interpretation (Fig. PT1.1a).

This shows how droplets bouncing on a vibrating fluid bath obey two-dimensional analogues of Maxwell's equations and a version of Schrödinger's equation. For the hard math, which explains how fermionic quasiparticles obeying Dirac's equation can arise in a bosonic fluid, see this paper ; another paper that may be relevant is here .
